

Your COVID-19 test result

NEGATIVE

A negative result for this test means that SARS-CoV-2 RNA (the cause of COVID-19) was not detected in the collection sample.

What does it mean to have a **negative** test result?

A negative test result does not completely rule out being infected with COVID-19.

If you test negative for COVID-19, this means the virus was not detected at the time your specimen was collected. It is still possible that you were very early in your infection at the time of your specimen collection and that you could test positive later.

Also, you could be exposed later and still develop the illness. For all these reasons, it is important to follow CDC guidance, including but not limited to frequent hand washing, social distancing, wearing a face covering, covering coughs and sneezes, monitoring symptoms, and cleaning and disinfectant of frequently touched surfaces - even after a negative test result.

Test information

Patient's name

Shreyas Srinivasa

Collection date

April 26, 2023 at 10:04 AM CT

Patient's date of birth

May 20, 2000

Collection location

418 W VALLEY AVE,
HOMEWOOD, AL 35209

Test type

SARS-COV-2 RNA, QL, RT PCR (COVID-19)

Provider

WEAVER DEANNA

Contact information

Customer Service: (886) 389-2727

Performed at: 01 - LabCorp Birmingham 5005 S 40th Street Ste 1200, Lab Director: Earle Collum MD, Phone: 8007889743 This nucleic acid amplification test was developed and its performance characteristics determined by LabCorp Laboratories. Nucleic acid amplification tests include PCR and TMA. This test has not been FDA cleared or approved. This test has been authorized by FDA under an Emergency Use Authorization (EUA). This test is only authorized for the duration of time the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 virus and/or diagnosis of COVID-19 infection under section 564(b)(1) of the Act, 21 U.S.C. 360bbb-3(b) (1), unless the authorization is terminated or revoked sooner. When diagnostic testing is negative, the possibility of a false negative result should be considered in the context of a patient's recent exposures and the presence of clinical signs and symptoms consistent with COVID-19. An individual without symptoms of COVID-19 and who is not shedding SARS- CoV-2 virus would expect to have a negative (not detected) result in this assay.
